BASE Trang, Thailand · Remote

Profile

Tech Lead with 10+ years in the Microsoft ecosystem — C#, .NET, and cloud architecture across AWS and Tencent Cloud, with hands-on Kubernetes and container expertise. Proven track record of building platforms from zero to scale: a B2B2C e-commerce platform that reached \$27M in its first 10 months, and a \$100M enterprise Odoo ERP program. Fully remote since 2020.

Skills

CORE STACK

- C# / .NET
- ASP.NET Core
- Java
- JavaScript
- SQL Server
- Python · Odoo

CLOUD & INFRASTRUCTURE

- AWS
- Tencent Cloud
- Kubernetes
- Docker
- CI/CD · Jenkins

ARCHITECTURE

- Microservices
- API Design
- Event-driven
- Observability

LEADERSHIP

- Team Leadership
- Agile
- Mentoring
- Internal Tooling

Open Source

IqOption.Net · ★96 — real-time trading API client with Rx.NET over WebSocket, published on NuGet

VehicleTracker · ★78 — CQRS + Event-Sourcing microservice reference (.NET Core, RabbitMQ, Docker)

Experience

★ internal promotion

Tech Lead, @ Ascend Commerce, True Corp.

★★
2019 – present

Lead engineering for WeOmni (weomni.com), an e-commerce enablement platform of 40+ microservices on AWS and Tencent Cloud, running on Kubernetes. Architected the B2B2C platform from scratch, reaching \$27M in sales within its first 10 months. Now leading an Odoo ERP program approaching \$100M in contract value — custom modules and integration APIs for multiple enterprise clients — where my 4-person squad (2 dev, 1 QA, 1 lead) shipped a \$50M-scale project in 2 months by pairing disciplined engineering with AI-assisted development. Also build internal tooling, from Jira automation to service monitoring, that accelerates the whole team.

.NET Developer, @ Brand New Day Diensten B.V.

2018 – 2019

Trusted as a quality gatekeeper for a regulated Dutch pension platform — reviewing pre-release code across multiple teams while building its web, service, and batch applications and shipping customer-driven features.

Developer & Co-Founder, @ KeenProfile.com

2018 – 2019

Co-founded and engineered an AI-driven recruitment platform that matches candidates to the right careers at a fraction of traditional cost. Designed the .NET Core microservice architecture on AWS and invented its key matching features — taking the product from idea to launch.

Creator & Maintainer, IqOption.Net (Open Source)

2017 – 2019

Created an unofficial .NET trading API client for IQ Option — streaming real-time options and stock data over WebSocket with Rx.NET reactive programming, sustaining thousands of messages per minute. Published on NuGet; earned 96 stars, 58 forks, and external contributors on GitHub.

Senior Developer, @ Excel Bangkok (Duvi AS)

★★
2015 – 2018

Delivered a pension and insurance platform for the Norwegian market built on a low-fee, no-touch concept — automation replacing manual operations. Owned the periodic calculation engine at the heart of the product and its ASP.NET APIs. The formative chapter of my career: this is where I absorbed the core concepts of great software — designing architectures by best practices, writing genuinely testable modules, and living CI/CD with Jenkins — principles I've carried into every platform since.

Technical Programmer, @ V-Smart Co., Ltd.

★
2013 – 2015

Built systems for BAAC, Thailand's state agricultural bank — an SQL perspective system, credit-card and calculation engines on complex SQL Server procedures, and ASP.NET web applications where accuracy was non-negotiable.

Education

Master of Computer Science, @ KMUTNB

2011 – 2016

Software Engineering — graduate research in AI, with published work on multi-class data classification using Error-Correcting Output Codes (ECOC).
– King Mongkut's University of Technology North Bangkok

Bachelor of Engineering Electronic, @ KMUTNB

2007 – 2011

Electronic Engineering Technology — built a computer-vision car license-plate recognition system using a web camera.
– King Mongkut's University of Technology North Bangkok
